

Addition von Brüchen (gleicher Nenner)

Name: _____

Datum: _____ Ergebnis: _____

$$\frac{3}{9} + \frac{4}{9} =$$

$$\frac{2}{8} + \frac{5}{8} =$$

$$\frac{2}{9} + \frac{3}{9} =$$

$$\frac{2}{8} + \frac{1}{8} =$$

$$\frac{7}{4} + 1\frac{1}{4} =$$

$$\frac{7}{3} + 1\frac{1}{3} =$$

$$\frac{5}{4} + \frac{5}{4} =$$

$$\frac{4}{7} + \frac{6}{7} =$$

$$\frac{5}{4} + 1\frac{2}{4} =$$

$$\frac{7}{2} + \frac{3}{2} =$$

Addition von Brüchen (gleicher Nenner)

Name: _____

Datum: _____ Ergebnis: _____

$$\frac{3}{9} + \frac{4}{9} = \frac{7}{9}$$

$$\frac{2}{8} + \frac{5}{8} = \frac{7}{8}$$

$$\frac{2}{9} + \frac{3}{9} = \frac{5}{9}$$

$$\frac{2}{8} + \frac{1}{8} = \frac{3}{8}$$

$$\frac{7}{4} + 1\frac{1}{4} = 3$$

$$\frac{7}{3} + 1\frac{1}{3} = \frac{11}{3} = 3\frac{2}{3}$$

$$\frac{5}{4} + \frac{5}{4} = \frac{5}{2} = 2\frac{1}{2}$$

$$\frac{4}{7} + \frac{6}{7} = \frac{10}{7} = 1\frac{3}{7}$$

$$\frac{5}{4} + 1\frac{2}{4} = \frac{11}{4} = 2\frac{3}{4}$$

$$\frac{7}{2} + \frac{3}{2} = 5$$
